Variante „Hochstraße versetzt“

Variante „Stadtstraße kurz“

Variante „Stadtstraße lang“

Interventions in urban spaces

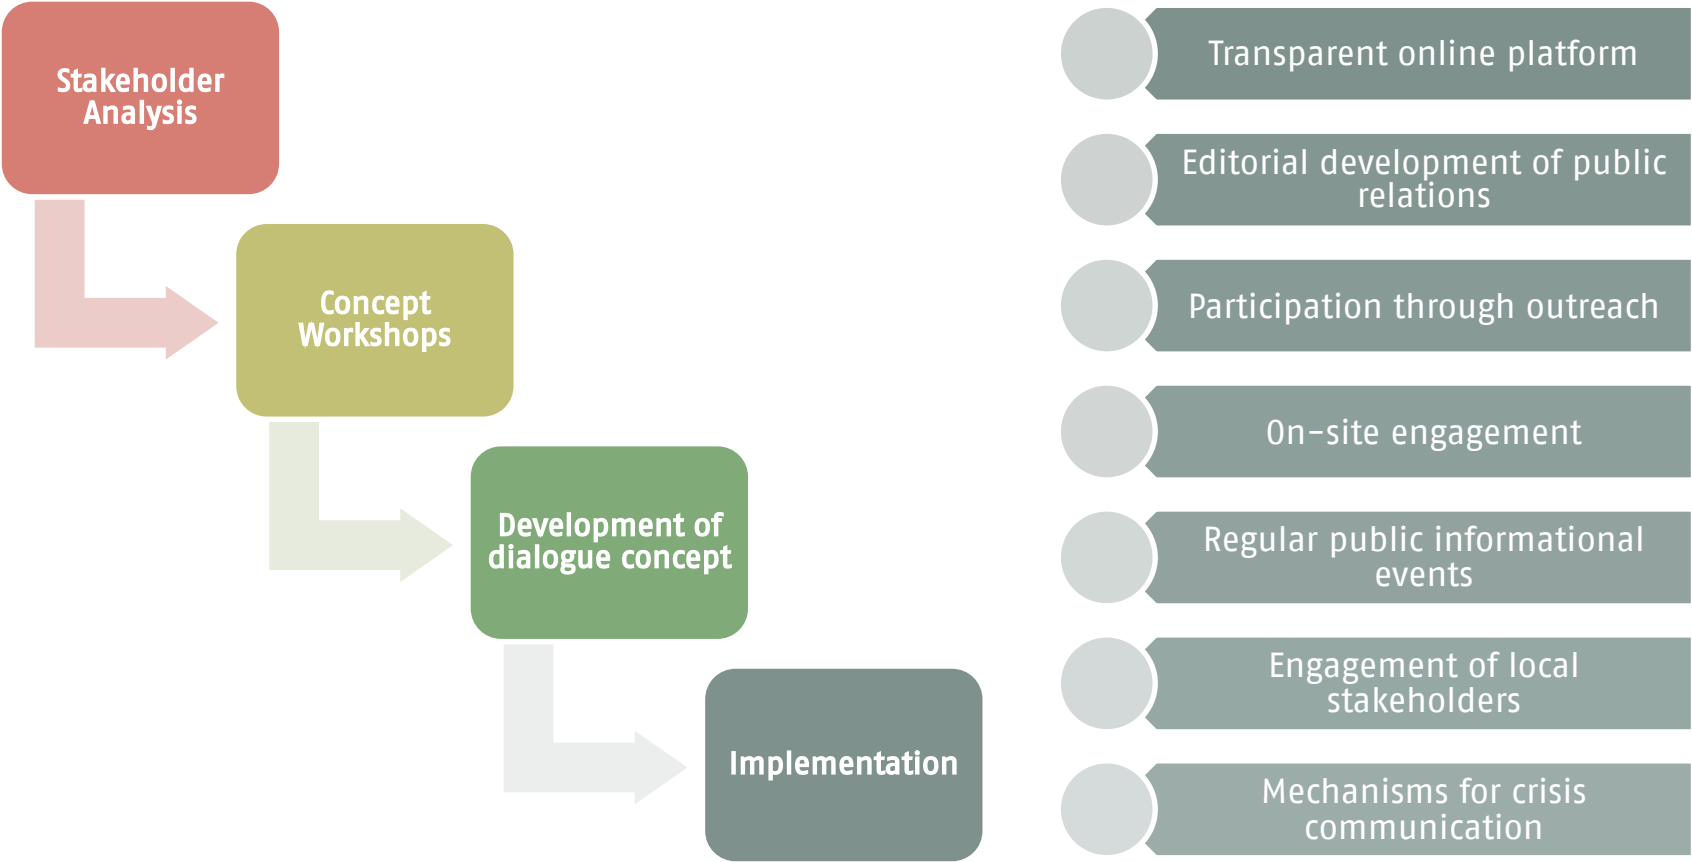

An aerial photograph of a wastewater treatment plant. The facility includes several large circular aeration tanks, rectangular sedimentation tanks, and various industrial buildings. A small pond is visible on the right side of the plant. The surrounding area is green and appears to be rural or semi-rural.

Case Study 1: Berliner Wasserbetriebe

The task of the project was the development of a communicative and participatory concept for the planned extension of a sewage treatment plant and the construction of a new recycling plant for sewage sludge.

Our Concept

A green, ornate public restroom structure in a park setting. The structure is made of dark green metal with decorative panels and a small tower on top. A sign on the front reads "HERREN". People are visible in the background, and there are trees and a paved area around the structure.

Case Study 2: Public restroom concept for Berlin

The task of the project was the development of a city-wide, inclusive and integrated participatory project with the goal of rethinking the needs of a multitude of interest groups – from citizens and the local government to tourists and retailers and beyond – concerning toilets in the city.

Our Concept
